

Anti-Phospho-Rb[pS807/pS811]-150Nd

Catalog #: 3150013A

Package Size: 50 tests

Storage: Store product at 4°C. Do not freeze.

Cross Reactivity: Rat, Mouse, Human

Clone: J112-906

Isotype: Mouse IgG2a

Formulation: Antibody stabilizer with 0.05% Sodium Azide

Technical Information

Validation: Each lot of conjugated antibody is quality control tested by CyTOF® analysis of stained cells using the appropriate positive and negative cell staining and/or activation controls.

Recommended Usage: The suggested use is 1 µl for up to 3×10^6 live cells in 100 µl. It is recommended that the antibody be titrated for optimal performance for each of the desired applications.

Human Jurkat T were incubated for 30 minutes in media containing 50 uM Cell-ID™ 127 IdU. Cells were fixed, permeabilized and stained with 150Nd-anti-pRb[Ser807/811] (J112-906).

Description

The Retinoblastoma (Rb) gene encodes a phosphoprotein that negatively regulates the cell cycle, and this activity is critical for the classic RB-mediated tumor suppression function. Mutations in the retinoblastoma (RB) susceptibility gene lead to childhood retinal cancer, and the RB pathway is altered in 70% of human cancer types. Upon mitogenic signaling, RB protein is inhibited by hyperphosphorylation, which disrupts RB transcriptional repression complexes to allow G1 to S phase transition. RB also induces S-phase arrest, triggered by the intra S-phase checkpoint in the presence of DNA-damaging agents, such as cisplatin and VP-16. RB also participates in other cellular processes, such as terminal cell differentiation and maintenance of genetic stability. It has also been suggested that RB can exert an anti-apoptotic function, and that RB is cleaved by caspases during apoptosis induced by VP-16 and Tumor Necrosis Factor- α (TNF- α).
