Anti-β-Actin (2F1-1)-154Sm

Pathologist-Verified Clone for Imaging Mass Cytometry™

Catalog number: 3154021D

Pack Size:
- Concentration: 25 µg, 0.5 mg/mL

Isotype: Mouse IgG2b

Pathologist-verified on: Human FFPE

Fluidigm tested on: Human FFPE, Mouse FFPE

Reported reactivity: Human, Mouse, Rat

Formulation: Antibody stabilizer with 0.05% sodium azide

Storage: Store at 4 °C. Do not freeze.

Application: IMC paraffin

Technical Information

Description: β-actin is a 42 kDa cytoplasmic protein that is one of 6 different actin isoforms expressed ubiquitously in all eukaryotic cells. As an essential component of the cytoskeleton, β-actin is involved in cell motility, structure, and integrity.

Application: The metal-tagged antibody is designed and formulated for the application of Imaging Mass Cytometry™ (IMC™) using the Fluidigm Hyperion™ Imaging System on formalin-fixed, paraffin-embedded (FFPE) tissue sections.

Quality control: Each lot of conjugated antibody is quality control-tested by Imaging Mass Cytometry on tissue sections.

Recommended concentration: For optimal performance it is recommended that the antibody be titrated for the desired application. Suggested initial dilution range: IMC-Paraffin: 1:25 to 1:100

Safety

Use standard laboratory safety protocols. Read and understand the safety data sheets (SDSs) before handling chemicals. To obtain SDSs, go to fluidigm.com/sds and search for the SDS using either the product name or the part number.

Human prostate adenocarcinoma (FFPE) stained with 154Sm-anti-β-actin (2F1-1) at a dilution of 1:50 (red pseudocolor), 148Nd-ant-pan-keratin (C51) (green pseudocolor), and iridium DNA intercalator (blue pseudocolor). Heat-mediated antigen retrieval was performed using Tris/EDTA buffer pH 9. Scale bar size = 100 µm.
