Anti-Human CD127[IL-7Ra]-149Sm

Catalog #: 3149011B
Package Size: 100 tests
Storage: Store product at 4°C. Do not freeze.
Cross Reactivity: Human

Technical Information

Validation: Each lot of conjugated antibody is quality control tested by CyTOF® analysis of stained cells using the appropriate positive and negative cell staining and/or activation controls.

Recommended Usage: The suggested use is 1 µl for up to 3 X 10^6 live cells in 100 µl. It is recommended that the antibody be titrated for optimal performance for each of the desired applications.

Human PBMCs stained with 170Er-anti-CD3 (UCHT1) and 149Sm-anti-CD127 (A019D5). CD45+ CD33- cells are displayed in the analysis.

Description
CD127, also known as the IL-7 receptor α chain or IL-7α, is a 60-90 kD type I transmembrane glycoprotein. It is a heterodimer consisting of IL-7Rα (CD127) and common-γ chain receptor (CD132), which is shared with various cytokines including IL-2,-4,-9,-13,-15 and -21. CD127 is expressed on immature B through early pre-B stage cells, thymocytes (except CD4/CD8 double positive thymocytes), peripheral T cells, and bone marrow stromal cells. It can be a useful marker for identifying memory and effector T cells and differentiation of Treg and conventional T cells. Antibody clone A019D5 recognizes a cell surface epitope of CD127.
