Anti-Human CD141-173Yb

Catalog: 3173002B
Clone: 1A4
Package Size: 100 tests
Isotype: Mouse IgG1
Storage: Store product at 4°C. Do not freeze.
Formulation: Antibody stabilizer with 0.05% Sodium Azide
Reactivity: Human,

Technical Information

Validation: Each lot of conjugated antibody is quality control tested by CyTOF® analysis of stained cells using the appropriate positive and negative cell staining and/or activation controls.

Recommended Usage: The suggested use is 1 µl for up to 3 X 10⁶ live cells in 100 µl. It is recommended that the antibody be titrated for optimal performance for each of the desired applications.

Description

CD141, also known as Thrombomodulin (TM), is a 75 kDa type 1 transmembrane glycoprotein. CD141 is an anticoagulant factor that mediates hemostatic function and regulates multiple functions important in inflammation and tumor promotion. A potential role for CD141 in tumor biology was further suggested by studies showing that its expression in tumor tissues correlated with a less advanced stage at diagnosis and a better prognosis. Anticoagulation, anti-inflammation, adhesion and proliferation have all been suggested as mechanisms mediating the effects of CD141 in tumors. CD141 is expressed on macrophages, monocytes, a subpopulation of myeloid dendritic cells, vascular endothelial cells and keratinocytes.
