Description

CCR7 (C-C chemokine receptor type 7), also known as CD197, binds CCL19 and CCL21. CCR7 and its ligands link innate and adaptive immunity through their effects on interactions between T cells and dendritic cells. CCR7 is expressed by naïve T cells, various cancer cells, such as nonsmall lung cancer, gastric cancer and oesophageal cancer and this expression is linked with metastasis to lymph nodes. Antibody clone G043H7 binds to an epitope of CCR7 when it is expressed on the cell's surface.
