Description

CD38, also known as T10, is a transmembrane glycoprotein. It is expressed at variable levels across most hematopoietic cells and in other tissues (i.e. Brain, muscle, kidney). In the mouse, CD38 expression is downregulated on mouse germinal center B cells and plasma cells, whereas this is not the case for humans. CD38 mediates adhesion as well as lymphocyte activation. CD31 is the ligand of CD38.
