Anti-Phospho-BAD [Ser112]-161Dy

Catalog: 3161006A  Clone: 40A9
Package Size: 50 tests  Isotype: IgG
Storage: Store product at 4°C. Do not freeze.  Formulation: Antibody stabilizer with 0.05% Sodium Azide
Reactivity: Human

Technical Information

**Validation:** Each lot of conjugated antibody is quality control tested by CyTOF® analysis of stained cells using the appropriate positive and negative cell staining and/or activation controls.

**Recommended Usage:** The suggested use is 1 µl for up to 3 X 10^6 live cells in 100 µl. It is recommended that the antibody be titrated for optimal performance for each of the desired applications.

![Image of pBAD (40A9)-161Dy](image.png)

COS-7 cells were incubated for 30 minutes in media alone (bottom) or with TPA (top). Cells were then fixed, permeabilized, and stained with 161Dy-anti-pBAD (40A9).

Description

BAD, the Bcl-2-associated death promoter protein, is a proapoptotic member of the Bcl-2 family involved in initiating apoptosis. After activation, BAD is able to form a heterodimer with anti-apoptotic proteins and prevent them from stopping apoptosis. Phosphorylation of BAD by Akt/protein kinase B inhibits the ability of BAD to form heterodimer with survival protein. Dephosphorylated BAD induces apoptosis by inactivating antiapoptotic Bcl-2-family members, thereby allowing Bax/Bak-triggered apoptosis.
