Maxpar Human T-Cell Phenotyping Panel Kit, 16 Marker—25 Tests

Catalog: 201305
Package size: 25 tests

Storage:
- Antibodies, buffers, and water: 4 °C. Do not freeze.
- Cell-ID Intercalator-Ir: -20 °C.

Contents:
- Maxpar® Cell Staining Buffer (500 mL)
- Maxpar Fix and Perm Buffer (25 mL)
- Maxpar Water (500 mL)
- Cell-ID™ Intercalator-Ir (125 µM; 25 µL)
- Maxpar Metal-Conjugated Antibodies (see table for panel)*

* The antibodies are provided in individual tubes, not a pre-mixed cocktail.

### Technical Information

**Description:** The Maxpar Human T-Cell Phenotyping Panel Kit is designed for use with fresh or frozen human whole blood or PBMC. The 16 antibodies in the kit allow for the identification of all major T-cell subsets including naive, central memory, effector, and effector memory CD4+ and CD8+ cells, and also classify the activation and homing status of these subtypes.

**Recommended usage:** Human whole blood or PBMC isolated by standard techniques are stained according to the Maxpar Cell Surface Staining Protocol. The kit contains buffers optimized for staining and a nucleic acid intercalator used for single-cell identification. Additional materials and equipment may be required for cell staining and acquisition. Please refer to Maxpar Cell Surface Staining Protocol. Data collection is performed on a CyTOF® mass cytometer.

**Analysis:** The .fcs files created can be analyzed by most programs designed for .fcs file analysis. An example analysis, Fluidigm Basic Human PBMC Panel, is available for reference at Premium.Cytobank.org. (Results will vary due to donor and staining condition differences.)

PBMC stained with the Maxpar Human T-Cell Phenotyping Panel Kit. Node size represents number of cells. Color represents CD8 expression level.
